

# Release Health by Sentry

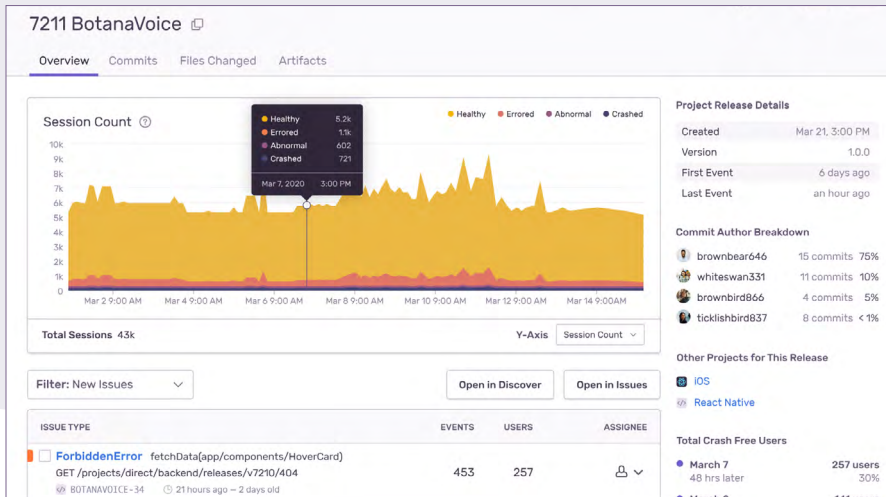

Number of sessions divided by number of crashes. That's how you determine the rate of crash-free sessions – a vital sign of your application's health.

Sentry's Release Health gives you the biometrics of your application. By surfacing key bits of data, you can understand how any given release is trending based on how many crash-free users are enjoying your experience.

*"Sentry helps our team fix the most important issues in each release. We can track how a release is trending by percent of crash-free sessions. With this data, we can remediate issues that impact the most users and move on to building more features."*

Jaylum Chen  
Staff Software Engineer, Eventbrite

## Data Depth

Are you seeing a decrease in crash-free sessions? Are several hundred customers experiencing the same issue on a new release? Resolve high-impact issues based on user session and crash data. Compare multiple releases, dive deeper into the history of any particular release, and see precisely when your release started to degrade.

RELEASE VERSION	DATE CREATED	COMMITTS BY 4 AUTHORS	NEW ISSUES
7211	14 min ago	1330	16

PROJECT NAME	RELEASE ADOPTION	CRASH-FREE USERS	CRASH-FREE SESSIONS	SESSIONS	24H	CRASHES	NEW ISSUES

## Version Adoption

Quickly see how a release is performing with your user base by tracking version adoption of your applications. Identify and resolve any upgrade blocking issues that are inadvertently introduced in new releases.

## Analysis

By identifying the moment your app begins to erode, Discover visualizes the impact of bugs from one release to the next. For example, if you notice a drop in crash-free users, Sentry will automatically build – and run – a query for events by release.
