SENTRY

Sentry by the numbers:

330k products and services monitored

4M+ developers

90k+ organizations

When it comes to enterprise, we check all the boxes.

- ☑ SSO
- ☑ Advanced Analytics
- ☑ SOC 2
- ☑ HIPAA
- ☑ Security Shield
- ☑ ISO27001 Compliance

These folks get it

About Sentry

Sentry is essential for monitoring application code health. From Errors to Performance Monitoring, developers can see clearer, solve quicker, and learn continuously about their applications - from the frontend to the backend. Loved by over four million developers and more than 90,000 organizations worldwide, Sentry provides code-level observability to many of the world's best-known companies like Disney, Peloton, Cloudflare, Eventbrite, Slack, Supercell, and Rockstar Games.

Code Monitoring at Scale

Increase developer velocity and remove silos with full visibility into your code health across your frontend, backend, APIs, and microservices - in a single platform.

Performance

In just five lines of code, trace your slow-loading pages back to poor-performing API calls.

Errors

Cut your resolution time from days to minutes so you can ship software that meets the demands of your customers.

Session Replay

Get to the root cause faster by viewing a video-like reproduction of a user's session leading up to an error or performance problem.

Ecosystem

With 45+ out-of-the-box integrations - including Slack, Pagerduty, Jira, and Github - and an open API to build custom intergrations.

Test Coverage

Integrate with Codecov to see code coverage in your stack trace. Know where your code is tested and where adding tests could prevent production errors.

Release Health

Ship with confidence with real-time visibility into release stability and version adoption so you can react faster to problematic releases.

People like us. (Companies like us too.)

"Sentry is a game-changer. We use it not only to alert us of errors in our production app, but also issues in our command-line tools and builds. Logs are for auditing. Sentry is for real-time automation. Be kind to yourself and use Sentry!"

Dan Lamotte, Sr. Principal Software Engineer, Symantec
